# Project Overview:

eLC Project description: https://uga.view.usg.edu/d2l/le/content/3771272/viewContent/60154082/View

# Hardware:

See updated hardware list

# Setup:

Setup for the SD card; hostname: "RP4-Group4", username: "rp4-group4", password: "group4"
Remote connection via MobaXterm instructions: In MobaXterm, in the upper left corner go to Session > SSH. For remote host, enter the IP address of the RP4. For username, enter "rp4-group4". Leave Port as "22". Click "OK" and you should connect.

# Issues:

- **Couldn't find exact diode for circuit schematic**
- **Unable to remotely connect to RP4 through WiFi (same network, correct host and user names; problem is something else)**
- **Didn't know how to create a new folder and move files to different locations on GitHub**

# Issues Resolved:

- **Quick Google search helped with new folders and moving files**
- **Able to remotely connect to RP4 through WiFi on hotspot network (fixed by using MobaXterm instead of powershell on Windows)**
